

# BEFORE AND AFTER WITH STEM STEM EQUINE – LEG INJURY

Before Stem Equine

After Stem Equine

## **Dee Smith's Injured Horse, Kentucky**

This horse got injured by getting its foot caught in an eight foot metal watering trough and kicked all night long trying to rid itself of the object that kept spooking it. When Dee Smith, the owner, found her horse the next morning she was devastated. The injury was terrible and she knew the vet would not give her good news when he arrived at the stable. When the vet examined the horse he noticed that the tendon was cut through over 2/3 of the way and immediately said: "There is nothing we can do for this horse but put him down." Dee refused to let him do that so she asked him for bandages and salves, etc. She said this was one of her best horses and she wasn't about to part with it. The Vet simply told her after she came out of denial to give him a call and he would put the horse down. Well, in the mean time she discovered the Stem Enhance product that people used on horses with various problems. When examining the photos please note received no stitches or surgery!! Again this is proof of how one's own adult stem cells can repair the damaged parts of the body.
